

CARE INSTRUCTIONS

Lacquered furniture and high gloss furniture

Wipe the surface with a slightly damp cloth, using only water or a mild soap cleanser. Wipe after with a dry cloth.

Be careful when you place hard objects that can harm the surface on furniture. Use mat, felt protection or fabric as protection.

Solid and veneer wooden furniture

Wood is a natural material which changes character through use and influence from light.

Wood changes shape due to variations in humidity that can cause an uneven surface.

Knots are completely natural and are not considered to be a defect.

Regardless if the wooden furniture is oiled, lacquered or untreated it can become scratched if treated carelessly.

Caution must be taken to untreated surfaces regarding grime, grease and liquids.

We recommend that oiled surfaces be treated with wax oil before use and periodically 2-3 times a year.

This is especially in regards to the top surface in order to maintain the surfaces resistance against stains and liquids.

Use a wax oil intended for its use.

Lightly sand surface along the wood fibres with a fine graded sandpaper (400 grit).

Apply oil evenly. Sand the oiled surface when oil is wet.

Wipe up the excess oil.

Let dry for approximately 24 hours.

Caution! Due to the risk of spontaneous combustion, the oiled cloth should be burned or thoroughly soaked in water after use.

Note! Don't oil surfaces with direct contact with material like textiles or wallpapers due to the risk for stains.

Don't put table clothes on surface and don't put the furniture direct on carpet before it is completely dry.
